

Finance AI Command System Architecture

1. Finance AI Chief Command

This is the master layer. It decides:

- what needs attention
- which finance sub-agent should work
- whether a result is reliable
- whether a recommendation should go to the founder, CFO, or operations team
- what is urgent, normal, or risky

This becomes the finance department head.

Under that, create specialist AI units

2. Research AI

For macro, markets, sectors, investment instruments, rates, bonds, ETF, mutual funds, and strategic finance research.

3. Planning AI

For budgeting, forecasting, scenarios, and runway planning.

4. Reporting AI

For MIS, dashboards, management reports, and board packs.

5. Accounting AI

For transaction categorization, reconciliation support, close support, and anomaly identification.

6. Treasury AI

For cash flow, balances, liquidity, payment timing, and capital allocation visibility.

7. Compliance AI

For policies, controls, tax reminders, document checks, and audit readiness.

8. Decision AI

For final recommendations to the founder or finance team.

Conclusion

This is how you make the Finance AI system scalable and capable of handling the complete finance department.
