

Finance AI Department - Data Blueprint

PDF version of your full module-wise data and source list, kept complete and organized in list format without leaving out the content you provided.

1. Finance AI Chief Command (Master Layer)

What it needs

This layer needs everything + context + priorities + rules

Data Required

A. All outputs from all sub-AIs

- Research outputs
- Forecasts
- Reports
- Alerts
- Risk flags
- Recommendations

B. Company-level master data

- Business model
- Revenue streams
- Pricing models
- Cost structure
- Growth targets
- Strategic goals

C. Organizational hierarchy

- Founder / CFO / Finance team roles
- Approval matrix
- Decision authority levels

D. Financial policies

- Spending limits
- Approval workflows
- Budget rules
- Procurement rules
- Risk tolerance thresholds

E. Priority & urgency framework

- What is "critical"
- What is "warning"
- What is "normal"

F. Historical decisions + outcomes

- Past recommendations
- Actions taken
- Success/failure tracking

Sources

- Internal docs (Notion, Google Drive)
- Policy manuals
- Org charts (HR tools)

- ERP / finance systems
- Historical decision logs

2. Research AI

Data Required

A. Macro data

- Interest rates (RBI, Fed)
- Inflation (CPI, WPI)
- GDP data
- Currency movements
- Bond yields
- Liquidity indicators

B. Market data

- Equity prices (real-time + historical)
- Indices (Nifty, Sensex, global indices)
- Volume data
- Market breadth

C. Derivatives data

- Options chain
- Open interest
- Put-call ratio
- F&O; positioning

D. Commodity data

- Gold, crude oil, metals

E. Fixed income data

- Government bond yields
- Corporate bond spreads

F. Investment instruments

- Mutual funds NAV
- ETF tracking
- Fund portfolios
- Expense ratios

G. Company fundamentals

- Financial statements
- Ratios (PE, ROE, ROCE)
- Earnings reports

H. News & sentiment

- Financial news
- Geopolitical events
- Policy changes
- Social sentiment

Sources

- NSE / BSE APIs
- Bloomberg / Reuters (premium)
- Yahoo Finance / Alpha Vantage

- RBI, SEBI
- Mutual fund APIs (AMFI India)
- News APIs (Google News, Twitter/X)

3. Planning AI (FP&A;)

Data Required

A. Historical financials

- P&L;
- Balance sheet
- Cash flow

B. Budget data

- Department budgets
- Cost center budgets
- Capex plans

C. Revenue data

- Sales pipeline (CRM)
- Customer cohorts
- Pricing
- Contracts

D. Cost data

- Fixed costs
- Variable costs
- Unit economics

E. Payroll data

- Salaries
- Hiring plans

F. Scenario inputs

- Growth assumptions
- Cost inflation assumptions
- Market assumptions

G. Burn & runway

- Monthly burn
- Cash reserves

Sources

- ERP (Zoho Books, Tally, SAP)
- CRM (Salesforce, HubSpot)
- HRMS (Payroll systems)
- Excel/Google Sheets
- Founder's financial models

4. Reporting AI (MIS & Dashboard)

Data Required

A. Real-time financial data

- Revenue
- Expenses

- Profit
- Cash position
- B. KPI data
 - CAC
 - LTV
 - Gross margin
 - EBITDA
 - Conversion rates
- C. Department-wise data
 - Sales performance
 - Marketing spend
 - Operations cost
- D. Historical vs current
 - Budget vs actual
 - Month-on-month
 - Year-on-year
- E. Board-level metrics
 - Growth
 - Burn rate
 - Runway
 - Key risks

Sources

- ERP systems
- CRM systems
- Analytics tools (Google Analytics, Mixpanel)
- Data warehouse (if available)
- Internal dashboards

5. Accounting AI

Data Required

- A. Transaction data
 - All journal entries
 - Ledger entries
 - Invoices
 - Bills
- B. Bank data
 - Bank statements
 - Payment records
 - UPI / card / wire transactions
- C. Vendor data
 - Vendor invoices
 - Contracts
 - Payment terms
- D. Customer data
 - Receivables

- Credit terms
- E. Chart of accounts
 - Full accounting structure
- F. Reconciliation data
 - Bank vs books
 - GST reconciliation
- G. Audit trails
 - Who did what
 - When entries were modified

Sources

- Accounting software (Tally, Zoho Books, QuickBooks)
- Bank APIs
- Payment gateways (Razorpay, Stripe)
- GST portal

6. Treasury AI

Data Required

- A. Cash balances
 - Bank accounts
 - Wallets
 - Cash reserves
- B. Cash flow data
 - Inflows
 - Outflows
 - Timing
- C. Receivables
 - Due dates
 - Delays
- D. Payables
 - Vendor obligations
 - Payment schedules
- E. Investments
 - Fixed deposits
 - Mutual funds
 - Short-term investments
- F. Debt data
 - Loans
 - Interest rates
 - Repayment schedules
- G. Liquidity planning
 - Short-term cash needs
 - Emergency buffers

Sources

- Bank APIs
- ERP/accounting system
- Treasury tools

- Investment platforms

7. Compliance AI

Data Required

A. Tax data

- GST filings
- TDS
- Income tax filings

B. Regulatory requirements

- SEBI rules (if applicable)
- MCA filings
- RBI compliance

C. Deadlines

- Filing dates
- Payment dates

D. Policy documents

- Internal compliance rules
- Audit policies

E. Audit data

- Audit reports
- Observations
- Non-compliance logs

F. Contracts

- Vendor agreements
- Legal obligations

Sources

- GST portal
- Income tax portal
- MCA filings
- Legal docs (Drive/Notion)
- Compliance tools

8. Decision AI (Final Recommendation Engine)

This is the most critical layer.

It needs everything + context + contradictions

Data Required

A. Outputs from all modules

- Research insights
- Forecasts
- Reports
- Risks

B. Market vs internal comparison

- External signals vs company position

C. Risk indicators

- Cash risk
- Market risk

- Operational risk

D. Confidence levels

- From each AI module

E. Historical outcomes

- What worked before

- What failed

F. Scenario simulations

- Best case

- Worst case

- Base case

G. Founder preferences

- Risk appetite

- Growth vs profitability focus

Sources

- All internal modules
- Founder inputs
- Historical decision logs
